The broad A indicates the character assigned to a Vessel built of Iron.

The character 100A indicates that the Yacht has been built in accordance with or equal to the Rules and Tables.

The character 90A is assigned to Yachts built in some respects deficient of the requirements for the 100A class.

The character A without a numeral prefixed is assigned to Yachts already built to which the Rules do not apply.

A dagger (thus †) prefixed to the class of a Yacht indicates that she is also classed in the Register Book for Merchant Ships, and that the scantlings are equal to the requirements of the same.

The figures under a character denote the date when the Vessel was last Surveyed.

When the thirteenth column is left blank (except as regards the date of Survey last recorded), it indicates that the Character has expired or been withdrawn from absence of Survey, or on account of non-payment of fee due in the case.

The figure 1 after the letter A or A indicates that the equipment is in accordance with the Rules.

A line thus — after the letter A or A signifies that the equipment is *not* in accordance with the Rules.

A red ring after the letter A or A signifies that the machinery or boilers are so far inefficient or defective as to imperil the vessel's safety; and a black ring over the figure 1 signifies that the masts or rigging of the Yacht are so far defective as to imperil her safety.

The eleventh, twelfth, and thirteenth Columns left blank, indicate that the Vessel has never been Classed in the Register Book. Three dots ... in Column 12 indicate that the Vessel was at one time Classed by this Society, but that the Class has been withdrawn at owner's request. A black line with date under it in Column 13 indicates that, at that date, the Vessel, from reported defects, was not entitled to a Character in the Register Book. A red line with date under it in this Column indicates that the Class was withdrawn from non-compliance, at that date, with the Society's Rules.

YACHT RACING ASSOCIATION.

RULE FOR ASCERTAINING RATING.

The rating of every Yacht entered to sail in a Race shall be ascertained by multiplying the sail area in square feet by the length in feet on the load water-line, and dividing the product by 6,000 (thus, $\frac{L \times S A}{6,000} = \text{rating}$); the quotient shall be the rating, and any fraction of, or exceeding .01 shall count as 1; except when the rating does not exceed 10. The length shall be taken in a straight line from the fore-end to the after-end of the load water-line, provided always that if any part of the stem or stern-post, or other part of the vessel below the load water-line, project beyond the length taken as mentioned, such projection or projections shall, for the purposes of the rule,

be added to the length taken as stated; and pieces of any form cut out of the stem, stern-post, or fair-line of the ridge of the counter, with the intention of shortening the load water-line, shall not be allowed for in measurement of length, if at or immediately below the load-line, nor above if within 6 inches of the water level.

TO CALCULATE THE AREAS.

Mainsail.

To find the area of the mainsail—Multiply A by B and C by D, as per illustration, and add the two products together and divide by 2.

Yard Topsail.

To find the area of yard topsail—Multiply E by F and G by H, as per illustration, and add the two products together and divide by 2.

Jib Header.

To find the area of jib header—Multiply K by L, as per illustration, and divide the product by 2.

Head Sails.

To find the area of head sails, jib topsail, or spinnaker—Multiply I by J, as per illustration, and divide by 2.

Pole Mast Head Sails.

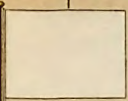

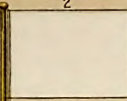

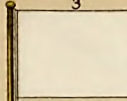

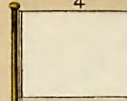

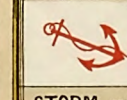

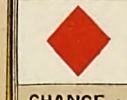

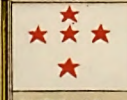

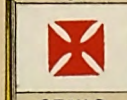

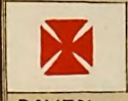

To find the area of head sail, for pole mast—Multiply I by J, as per illustration, and divide by 2.

SCHOONER'S AND YAWL'S SAILS.

The area of a schooner's sail or a yawl's sail would similarly be found; in the case of a yawl having a lug mizen the lacing-holes in the yard would be taken as the upper boundaries.
